Innovations in energy research become more and more important to secure the future of economy and society. Energy resources have to be used in a most efficient and cost-saving way.

The 3rd Dresden conference »Energy in Future« will present the latest research results in the fields of electrical energy generation, energy storage and energy efficiency.

We are happy to invite you to participate in this conference, to meet renowned scientists and economic experts and to take part in the accompanying exhibition.
Lithium-sulfur batteries are the most promising choice for future energy storage systems. Novel materials such as nanostructured carbon/sulfur composite cathodes, solid electrolytes and alloy-based anodes are expected to significantly enhance the cell’s performance.

Following the great success of our previous Lithium-Sulfur Battery Workshop in 2014, this year’s symposium will again bring together an international audience of scientists and industrial customers.

Renowned experts will present the latest results, new materials, processes and applications in the field of lithium-sulfur batteries. We are looking forward to welcoming you at Dresden.

November 11, 2015
International Congress Center Dresden, Germany

Lithium-sulfur batteries are the most promising choice for future energy storage systems. Novel materials such as nanostructured carbon/sulfur composite cathodes, solid electrolytes and alloy-based anodes are expected to significantly enhance the cell’s performance.

Following the great success of our previous Lithium-Sulfur Battery Workshop in 2014, this year’s symposium will again bring together an international audience of scientists and industrial customers.
